

Table 3.2. Preliminary assessment of data suitability.

Dataset Name	Dataset Steward	Dataset Vintage	Dataset Purpose	Constraints Relating to the CCAM
Advanced Identification of Wetlands	FMRI	1991 Aerial Photos	Rapid assessment of wetlands requiring additional protection measures	Some areas classified as "developed" have vegetation within the developed boundary.
Environmental Sensitivity Index	FMRI	Classification performed in 1993	Oil spill response	See ESI disclaimer from FMRI. Generalized data to support rapid decision-making.
Benthic Shoreline	FMRI	1991-92 Aerial Photos	To distribute the digital benthic habitat data.	The benthic and Advanced Identification of Wetlands shorelines were not delineated using the same source data, and therefore, do not match in some areas (e.g. Middle and Big Torch Keys).
Parcels	Monroe County Property Appraiser's Office	Parcel geometry: approximately 2 years old Tax roll attribute data: November 2000	To serve as an information base for the property appraiser	Parcel geometry is shifted, land cover information not in dataset
Wastewater Master Plan	Monroe County/CH2MHill	Approximately 2 years old	Wastewater infrastructure investment and planning for Monroe County	Wastewater data were summarized by island and not dispersed to a near shore circulation model. The wastewater consultant did not complete the parcel database with wastewater loads assigned to each parcel.
Stormwater Master Plan	Monroe County/CDM	Currently being developed	Stormwater infrastructure investment and planning for Monroe County	These data are still being developed and are in a quality control/quality assurance process. The FKCCS contractor has noted several discrepancies in the stormwater calculations and has briefly conferred with the stormwater consultant about these numbers.
